EDUCATION

University of South Florida

Bachelor of Science in Computer Science

Tampa, FL

Aug. 2021 – May 2025

- **GPA:** 3.6
- **Relevant Coursework:** Database Design, Data Storage and Analysis with Hadoop, Automata Theory, Social Media Mining, User Experience Design, Secure Coding, Operating System

EXPERIENCE

DefTechLink

Full Stack Developer Lead

Tampa, Florida

March 2025 – Present

- Architected and implemented an automated ingestion pipeline using AWS Lambda and EventBridge to process 1,000+ daily contract notices across multiple government sources.
- Architected a scalable Flask backend with 20+ modular API blueprints, integrating Auth0 JWT/OAuth authentication and role-protected endpoints.
- Designed, normalized, and optimized a PostgreSQL database schema with indexing and relational constraints to ensure efficient querying and data integrity at scale.
- Integrated Stripe subscription billing (plans, checkout, enterprise seat logic) to support SaaS monetization and account lifecycle workflows.
- Implemented secure S3 presigned upload endpoints for user and company assets, including automated replacement cleanup and persistent metadata storage in PostgreSQL.

U.S. Department of the Air Force

Software Engineer Intern (Secret Clearance)

Warner Robins, GA

June 2024 – July 2024

- Led backend development as the Backend Lead, spearheading efforts to develop a full-stack management application that centralized metrics and sprint tracking for over 10 ongoing projects.
- Containerized a PostgreSQL database with Docker for scalable data handling used by 300+ engineers.
- Applied AGILE project management practices using Jira and Figma for design concepts and sprint planning, leading to the successful completion of 3 sprints.
- Developed 10+ CRUD REST APIs using Flask and SQLAlchemy to store, retrieve, and modify data in PostgreSQL.

PROJECTS

Perfect Path | Python, Flask, HTML/CSS, JavaScript, PostgreSQL, AWS

- Developed a class scheduling web application for course planning and sharing schedules, utilizing 28 unique core and elective classes in the Computer Science program at USF.
- Implemented user authentication and authorization features, including password validation and admin privileges.
- Hosted the PostgreSQL database on cloud AWS for seamless access and modifications.

TwitterFeel | Python, Tensorflow, Pandas, Numpy, Hugging Face

- Cleaned and filtered a Kaggle dataset of 20,000 tweets by performing lemmatization using Python and Pandas to create a clean, structured dataset for analysis.
- Implemented and trained Long Short-Term Memory (LSTM) models with TensorFlow to predict future tweet emotions by leveraging users' tweet history.
- Improved model performance by applying SMOTE and filtering dataset users with extreme tweet counts, achieving an accuracy, precision, recall, and F1 score of 0.82.

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, C++, C, HTML/CSS, SQL

Frameworks: Flask, SQLAlchemy, Node.js, React, Bootstrap

Backend & Cloud: REST APIs, AWS (Lambda, EventBridge, RDS, S3, EC2), Auth0 (JWT/OAuth), Stripe, Docker

Databases: PostgreSQL, MySQL, SQLite

Tools: Git/GitHub, Linux, Jira, Figma, Notion
